Application/Control Number: 10/086,269

Art Unit: 1771

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

- 2. Claims 24-25, 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi et al, U.S. Patent No. 4,656,080 in view of Hirasaka et al, 5,108,678 for the reasons set forth in the previous office action.
- 3. Claim 26 is rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi et al, U.S. Patent No. 4,656,080 in view of Hirasaka et al, 5,108,678 and further in view of Spngler, for the reasons set forth in the previous office action.
- 4. Claims 27, 29 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi et al, U.S. Patent No. 4,656,080 in view of Hirasaka et al, 5,108,678 and further in view of Spengler and Eckart et al, for the reasons set forth in the previous office action
- 5. Applicant's arguments filed 3/15/04 have been fully considered but they are not persuasive. Applicant argues that Takahashi discloses sandwiching the fabric between two similar layer and teaches drying the bonding material layer. However, the instant claims do not preclude the presence of additional layers or drying the bonding material layer. Takahashi discloses the claimed process steps except for the cold press bonding step which is taught by Hirasaka. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Thus, since Takahashi teaches laminating the claimed layers, it is not required that the other references teach this part of the claim. The other references are relied on to show that cold pressing was known in order to

Application/Control Number: 10/086,269

Art Unit: 1771

improve smoothness and uniformity in laminated layers, or that tenters are useful for holding fabrics. The fact that Hirasaka forms a laminate having a gradient would not mean that one of ordinary skill in the art would not have been motivated to apply the teaching of Hirasaka regarding the advantages of cold-pressing to the laminate of Takahashi.

6. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth M. Cole whose telephone number is (571) 272-1475. The examiner may be reached between 6:30 AM and 6:00 PM Monday through Wednesday, and 6:30 AM and 2 PM on Thursday.

Mr. Terrel Morris, the examiner's supervisor, may be reached at (571) 272-1478.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
